

Difference Between HTTP and HTTPS

HTTP

HyperText Transfer Protocol

Used for communication between browser and server

Data is transferred in plain text

Less secure

Does not use SSL/TLS certificate

Vulnerable to cyber attacks

Uses Port 80

URL starts with [http://](#)

No security padlock in browser

HTTPS

HyperText Transfer Protocol Secure

Secure communication between browser and server

Data is transferred in encrypted form

Highly secure

Uses SSL/TLS certificate

Protects sensitive information

Uses Port 443

URL starts with [https://](#)

Displays security padlock in browser
